Jakarta Timur, Daerah Khusus Ibukota Jakarta, 13890

I am an undergraduate Mathematics student at the University of Indonesia with a strong focus on software development, data science, and artificial intelligence. My academic background in mathematics provides a solid foundation for analytical thinking. I have hands-on experience in backend development, data analysis, and machine learning, allowing me to create effective, scalable data-driven solutions for real-world challenges

EDUCATION

Universitas Indonesia

Depok, Indonesia

Bachelor of Mathematics

2023 - Present

Currently in the third year

Relevant Courses: Linear Algebra, Algorithm and Programming, Data Structure, Data Science, Digital Image Processing, Web Mining, Bioinformatics & AI

NON FORMAL EDUCATION

Sanber Campus X ITB

Jakarta, Indonesia

Full Stack Data Science

October 2024 - February 2025

Subjects Studied: Data Manipulation and Analysis, Data Visualization, Time Series Analysis, Statistics, Machine Learning, Natural Language Processing (NLP)

WORK EXPERIENCE

PT. Mitra Cakra Digital

Jakarta, Indonesia

Developer

February 2026 - April 2026

- Developed a high-performance face recognition Attendance API, implementing efficient feature embedding extraction and vector-based matching for rapid, large-scale identity verification.
- Engineered a secure whistleblowing system using advanced prompt orchestration to automate multi-category report classification, integrating RAG architecture and robust PII masking to maintain confidentiality and streamline audit workflows.

IT Developer Intern

August 2025 - February 2026

- Developed backend applications using FastAPI, integrated with PostgreSQL, Celery-Redis, and automated web scraping + OCR, enabling efficient large-scale data processing.
- Designed and implemented an Entity Relationship Diagram (ERD) for a large-scale database system, and created SQL queries, dashboards, and data visualizations to generate actionable insights.

EXPERIENCE

Lomba dan Kegiatan Matematika (LOGIKA) 2025

Depok, Indonesia

Head of Data Science Competition Division

2025 - Present

- Leading the design and implementation of a national-scale data science competition under HMDM UI.
- Designed competition structure, judging flow, and real-world case problems tailored for undergraduate students.

- Established collaborations with the UI Data Science Center and other external institutions to secure relevant datasets and experienced judges.
- Successfully attracted 100+ participants from universities across Indonesia in a multi-phase competition format.

Himpunan Mahasiswa Departemen Matematika

Depok, Indonesia

Deputy of Evaluation and Management - Biro Manajemen Evaluasi, Riset, dan Analisis

2025 - Present

Led internal evaluations and organizational assessments across departments and programs.

- Initiated and supervised a new evaluation system covering 30+ eventual work programs.
- Developed and executed a new framework to assess 13 bureaus and departments over two semesters

PROJECT

AI Whistle Blowing System using RAG

2026

Developed an intelligent, anonymity-focused reporting platform leveraging Retrieval-Augmented Generation (RAG) and PII Masking to ensure secure corporate transparency. Integrated FastAPI with vector databases to provide context-aware responses and automated case categorization while maintaining strict data privacy.

Dementia Brain MRI Generation using Conditional DCGAN

2026

Built a cDCGAN model to generate 128x128 grayscale brain MRI images for Alzheimer's stages using the OASIS dataset, integrated with HuggingFace Hub for easy access. [\[Link\]](#)

Face Recognition Attendance System

2026

Created a face recognition attendance system using computer vision to automate and improve accuracy. Integrated with Flask, PostgreSQL, and real-time detection for efficient attendance tracking. [\[Link\]](#)

PDF-Based RAG System

2025

Developed a PDF-based RAG system to turn static documents into interactive knowledge bases. Utilized HuggingFace embeddings, ChromaDB, and Google Gemini for precise, context-based answers. [\[Link\]](#)

Heart Disease Prediction (ANN)

2025

Developed a deep learning model to predict heart disease using clinical data and optimized it with Keras Tuner for better F1-Score. [\[Link\]](#)

E-Commerce Customer Sentiment Analysis (Tokopedia)

2024

Developed an NLP system for Tokopedia reviews, classifying feedback into positive or negative. Used Gaussian Naive Bayes and TF-IDF for real-time customer satisfaction monitoring. [\[Link\]](#)

SKILL

Programming & Tools: Python, SQL, Pandas, NumPy, Scikit-learn, Keras, Matplotlib, Seaborn, Streamlit, Google Colab, Git, VS Code, FastAPI, Langchain, Redis, Celery, Qdrant, ChromaDB, Ollama, Docker.

Data Science & Analytics: Data Cleaning, Data Visualization, Machine Learning, Statistical Analysis, Time Series Analysis, Natural Language Processing (NLP), Classification & Clustering, Sentiment Analysis

Software & Productivity Tools: Google Workspace (Docs, Slides, Sheets, Form, Drive), Canva, Excel

Soft Skills: Problem Solving, Critical Thinking, Leadership, Project Management, Communication
